### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Zhu et al (US 6,812,176). Zhu teaches a thermal barrier coating composition comprising a base oxide (zirconia), a primary stabilizer, dopant A, and dopant B. The base may have a range of 46-97 mol%. The primary stabilizer may have a range of 2-25 mol% and is may be a combination of yttria and erbia. Dopant A may have a range of 0.5-25 mol%, and may be any rare earth oxide (such as lanthana (col. 2, lines 60-65). Since Group A may be a mixture of erbia and yttria, this is considered to meet the limitation of the first and third metal oxides. The amounts that may be present overlap with that of the ranges of the instant claims.

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4, 6-12, and 14-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zhu et al (US 6,812,176) in view of Litton et al (US 6,730,422). Zhu teaches a thermal barrier coating

Art Unit: 1775

composition as discussed above. While the specific examples given by Zhu do not have the same proportions of the instant claims, it is clearly teaching the combination of these oxides. Furthermore, the ranges for each of the oxides in the composition of Zhu overlap significantly with those of the instant claims. One of ordinary skill in the art at the time the invention was made would have considered the invention to be obvious because the compositional proportions taught by Zhu overlap the instantly claimed proportions and therefore are considered to establish a prima facie case of obviousness. It would have been obvious to one of ordinary skill in the art to select any portion of the disclosed ranges including the instantly claimed ranges from the ranges disclosed in the prior art reference, particularly in view of the fact that;

"The normal desire of scientists or artisans to improve upon what is already generally known provides the motivation to determine where in a disclosed set of percentage ranges is the optimum combination of percentages", In re Peterson 65 USPQ2d 1379 (CAFC 2003).

Also, In re Geisler 43 USPQ2d 1365 (Fed. Cir. 1997); In re Woodruff, 16 USPQ2d 1934 (CCPA 1976); In re Malagari, 182 USPQ 549, 553 (CCPA 1974) and MPEP 2144.05.

Regarding claims 8-12, and 14-23, Zhu does not expressly teach an article having the coating composition thereon, but clearly teaches that the coating is to be used as a thermal barrier coating for a jet engine turbine blade. Litton teaches a thermal barrier coating comprising a zirconia-based ceramic with multiple oxides added thereto. Litton also includes a bond coat, and described the thickness columnar orientation of the thermal barrier coating. It would have been obvious to one of ordinary skill in the art at the time of the application to use the coating of Zhu in a manner similar to that of Litton, as it is clearly asserted that the composition is to be used as a thermal barrier coating for turbine engine components.

## Allowable Subject Matter

Claims 5, 13, and 23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer C. McNeil whose telephone number is 571-272-1540. The examiner can normally be reached on 9AM-6PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Deborah-Jones-can-be reached on 571-272-1535. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
